SUMMARY

Full-stack software engineer with 3+ years building and shipping production web applications in PHP/Laravel, JavaScript, and MySQL. Delivered a school management system, HR payroll module, and hospital frontend serving real end-users. Comfortable across the stack — from query optimisation to responsive UI — and focused on writing clean, maintainable code that solves business problems.

TECHNICAL SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, HTML5, CSS3, Bootstrap

Databases: MySQL (query optimisation, indexing), MongoDB

APIs & Testing: RESTful API design, Postman

Version Control: Git, GitHub (branching, PRs, code review)

Design & Prototyping: Figma, Adobe Photoshop

Collaboration Tools: ClickUp, Slack, Zoom, Discord

EXPERIENCE

Software Engineer (Remote) – Part-time · ABCD Systems Limited — May 2024 – Present

- Engineered a full-featured School Management System covering student enrolment, attendance, grading, and an integrated inventory module — reducing manual admin overhead for school staff.
- Built and launched a Church online platform handling member management and event coordination, serving an active congregation of users.
- Implemented dynamic report generation (PDF/Excel exports) used by school administrators to make data-driven decisions on student performance and inventory levels.
- Collaborated in a remote cross-functional team using Git branching workflows and ClickUp for sprint planning, consistently shipping features on schedule.

Software Engineer Intern · Orcons Systems Limited — Jan 2026 – May 2026

- Sole developer responsible for the payroll module of an HR Management System — implemented salary calculations, deductions, and payslip generation for a multi-staff organisation.
- Developed the frontend for a hospital management system's dental department, delivering a responsive, accessible UI that improved clinician workflow.

Software Engineer Intern · Orcons Systems Limited — Sep 2024 – Dec 2024

- Integrated and tested third-party REST APIs using Postman, improving system data-exchange efficiency and catching integration bugs before production.
- Built responsive page layouts using HTML, CSS, and JavaScript that rendered correctly across Chrome, Firefox, and mobile viewports.
- Adopted Git feature-branch workflow, cutting merge conflicts and enabling parallel development across the intern team.

Software Engineer Intern · Orcons Systems Limited — Oct 2023 – Dec 2023

- Debugged and resolved front-end and back-end defects in PHP/Laravel web applications, reducing reported bug count during the internship cycle.
- Rewrote slow MySQL queries and added appropriate indexes, measurably reducing page-load times on data-heavy views.

PROJECTS

PharmaSysGh – Multi-tenant pharmacy management software — PHP · MySQL · JavaScript · Bootstrap

- Designed and built a full-stack multi-tenant pharmacy system: pharmacies register, manage inventory, receive payments online and point of sale service.
- Implemented pharmacy branch system where administrators can manage multiple branches.

Online Voting System — PHP · MySQL

- Developed a secure, organisation-level voting platform with candidate registration, ballot casting, and real-time result tallying.
- Enforced one-vote-per-member integrity constraints at both application and database levels to prevent duplicate submissions.

Event Management System — Laravel · MySQL · Bootstrap

- Building a responsive web app to handle event creation, attendee booking, and payment tracking — reducing manual coordination for event organisers.

Online News Portal — Laravel · MySQL · JavaScript

- Building a content-management-backed news portal with category filtering, article publishing workflow, and SEO-friendly URL routing.

EDUCATION

B.Tech in Computer Science Jan 2023 – Present Koforidua Technical University, Koforidua

WASSCE — General Science Nov 2019 – Sep 2022 Adisadel College
